2006 lexus gs300 headlight

There are 8 choices for the Lexus GS Headlight!!! Choose Your Option. We offer an industry leading 1-year warranty on every part type we sell. All of our engines and transmissions carry a 1-year warranty with optional extensions up to 2 additional years. Claims on engine warranties are limited to manufacturer defects in the pistons, heads, block, crankshafts, rockers, and oil pumps. Though additional parts and accessories may be attached upon purchase, coverage does not extend to sensors, switches, cables, electronics, belts, hoses, water pumps, or manifolds, nor damage caused through overheating or improper lubrication. Due to the COVID pandemic, your order may arrive later than expected so please allow an extra few working days for your order to arrive. We can ship anywhere in the 48 contiguous U. We do not require a core charge or a return of the old part or engine. The more local you shop, the more you save off the shipping cost. It typically takes us approximately business days to process a credit back to your account and business days for the credit to appear on your account. Note all returns and cancellations require a prior authorization. Terms : All returns and cancellations may be subject to shipping charges, unless caused by our error or cancelled by the customer prior to shipping. No returns without prior authorization from the Supplier see Contact Us page. Replacements : It is company policy that we receive the original auto part back before sending you a replacement auto part. The original auto part must be returned using the provided shipping label. The shipping cost for both the original and the replacement auto part is a cost attributed to the shipper at hand. Note, if these auto parts are not shipped back to the supplier within 30 days of the delivery date of the replacement part, the buyer's credit card is subject to a recharge for the initial cost of the original auto part minus the initial shipping cost If you have any questions about the shipping back of the original part, please contact customer service team at Press 2 for Returns open Monday-Friday pm EST Or email cs allusedparts. Disclaimer : -Some of our units used engine, transmission, axle, etc. They will need to be replaced before installation. Common items that are not guaranteed include but not limited too nuts, bolts, links, seals, bushings, ball joints, brackets, bezels, wiring, cables, sensors and other applicable items depending on the part. If they are not serviceable, such as a pressed-in ball joint, they will be guaranteed. The purchased item may need to be repainted, refinished, or reupholstered for proper color match. ASSY B Update Your Location. Replacing the headlight bulbs on a Lexus GS is more complicated than on most vehicles. Instead of simply opening the hood and reaching behind the headlamp assembly to replace the bulb, the GS requires you to raise the vehicle, remove the tire, loosen the wheel well cover, and replace the bulb through there. The GS has two headlight bulbs on each assembly, a high beam bulb and a low beam bulb. The high beams use type bulbs and the low beams use type bulbs. Turn the GS's engine off. Put on a pair of clean gloves and place the jack under the vehicle. Open the hood. Raise the GS to a comfortable position and remove the lug nuts with the wheel wrench. Once the nuts are removed, remove the wheel cover with the wheel wrench and remove the tire from the vehicle. Remove the two screws holding the wheel well cover in place and take the cover off. Use a socket wrench to remove the two headlamp assembly retaining bolts. Pull the wiring connector off the rear of the assembly and push the assembly forward. Go to the front of the GS and pull the assembly out of the engine compartment. Rotate the GS's bulb sockets counterclockwise and pull them off the assembly. Pull the bulb out of the socket and install the new bulbs. Place the sockets back into the assembly and rotate them clockwise to secure them. Place the assembly back into the engine compartment and reconnect the wiring connector at the rear of the assembly. Crawl under the vehicle and reattach the two retaining bolts. Place the cover back onto the wheel well and reinstall the two screws. Reattach the tire and close the hood. Daniel Valladares began his career as a medical writer in He has written patient education brochures for several pharmaceutical companies and has worked as an auto mechanic at Kim's Speedy Auto Service since Valladares holds a Bachelor of Arts in English from Rice University and is currently studying to become a personal trainer. Step 1 Turn the GS's engine off. Step 2 Raise the GS to a comfortable position and remove the lug nuts with the wheel wrench. Step 3 Remove the two screws holding the wheel well cover in place and take the cover off. Step 4 Go to the front of the GS and pull the assembly out of the engine compartment. The most recently reported issues are listed below. I'm having serious problems with my headlights going out intermittently while driving. About 5 minutes after I turn them on, usually my passenger headlight goes out first, then about five to ten minutes later, the driver headlight light goes out. It's strange, sometimes only one goes out, and other times they both go out. The problem is, it becomes a serious

safety issue when they go out, because most times I am completely unaware until someone on the road gets my attention and tells me, or I'm constantly turning my headlights off and on, which seems to be the temporary fix. The problem with that though is I'm constantly flashing the car in front of me turning my lights of and on. Clearly there is an electrical issue here, some kind of short or something, especially when every single day I see other vehicles on the road, just like mine, having the same issue. Driving around with one light on and one light off, it's ridiculous. It's dangerous! I commute 2 hours round trip everyday on the highway for work and my child's school, and it's dark in the morning when we leave home and dark in the evening on our way home. It's extremely dangerous, especially on fog days and rainy days like today. This issue needs to be recalled. Enough is enough!. The contact owns a Lexus Gs The contact stated that while driving at varies speed, the headlights intermittently failed. The vehicle was not diagnosed or repaired. The manufacturer was not notified of the failure. The approximate failure mileage was unknown. As I was driving one evening both headlights turned off alone. I turned the knob off and on and they restarted, but now continue to turn off intermittently. Sometimes one sometimes both after different amounts of time. I have had the bulbs replaced but the problem still persists. Since my vehicle has reached 80, miles one of my headlights would automatically turn off itself when I am driving. This happens very often. It would be either left or right that will go off or sometimes both at the same time. I would have to turn it off and turn it on again and both will work fine. I constantly have to do this every time I have my headlights on. This is very frustrating and dangerous when I have my kids in the car. I drive a Lexus Gs that is having a problem with the exterior headlight randomly turning off while I am driving. This can be very dangerous and I have already received one ticket for this. I see there are many other people on here complaining about the exact same problem and I don't understand why an investigation has not been opened. This exact same problem happened to what im assuming was my other side, about a year ago. I definitely cant afford to pay that right now and not to mention I already got a ticket for this. I have been trying not to drive my car at night but it is very inconvenient. Are there any alternative methods I could use as a temporary fix until I can get this fixed?. Either driver's or passenger's or both side headlight will turn off by itself. I have notice a slight flicked few months back but barely noticeable. I turn it off and on and it comes back on. After 5 min of driving, it will turn off again randomly. The bulbs are fine. This is very very dangerous in a rural area where there are very little street lighting. Dealer won't do anything. Car max, inc. Sold [xxx] a defective automobile. Carmax refuse to repair the automobile. March 28, ; Lexus of memphis replaced cogged ac filter. Engine front cover seal has noticeable oil leak, and left rear door lock actuator does not work. Invoice [xxx]. Mileage , As recommended by Lexus technical service information bulletins dtc diagnostic trouble codes ,[xxx] recommended the following corrective actions: 7. Trans solenoid dtc p was detected on November 23, and April 9, Information redacted pursuant to the freedom of information act foia , 5 u. Driver side headlight goes out shortly after being turned on. Sometimes if I turn the lights off and back on, they work. After googling the subject, I found that there are lots of other concerned Lexus owners complaining about the same problem. At first I thought I needed to replace the bulb. This issue keeps occurring. After careful review, it was nice to know that I am not the only one, but at the same time it is unsettling to see that so many other people are having the same problem. For the past eight months I have had problems with my headlights during evening hours. I always turn them on at night and noticed that my driver headlight would go out after about five to ten minutes of driving and shortly after the passenger light would go out. At first I thought I needed to replace the bulb, but I somehow discovered a glitch in that if I manually turn my lights off and then turn them back on they both turn on. However, the problem seems to be very cyclical and happens more often and with a shorter gap in time of turning off. Knowing that my bulbs are not burnt out in that they are able to turn back on leads me to believe something is wrong electrically and shorting. My main concern is that I worry that both lights are off and other driver's cannot see me. The other worry is that I am constantly flashing other drivers by always turning my lights off and on. After reviewing this site, it was nice to know that I am not the only one, but at the same time it is unsettling to see that so many other people are having the same problem. My Gs has been having the same problem, intermittent headlight, for over a year. Dealers do not want to admit the issue. It is scary when both lights go off in the highway at night. I am trying to find out how I can get the Lexus to issue a recall for this problem. I am thinking to got my lawyer involved. My email is [xxx] I am thinking to create a list of owners who are experiencing this issue and collectively request for a recall. Please feel free to contact me with any comment or suggestion. While driving approximately 45 mph with the headlights illuminated, the headlights began to illuminate off and on independently. The failure persisted intermittently. The contact stated that sporadically, the headlights would fail altogether. The vehicle was not taken to have the failure diagnosed or repaired. The VIN was unavailable. The

failure mileage was 60, and the current mileage was 62, While driving, the headlights on either the driver side or passenger side sometimes both intermittently turn off. Most of the time, it is the passenger side. I have found out that if I turn the lights off and back on they work, but I have to repeat the process a number of times. Driver side headlight continues to go out while driving at night. Rattling noise when car starts up. Truck won't release from key or from truck release inside car. The contact aneuvered to the side of the road to confirm that the light was no longer illuminating. The contact replaced the bulb, but the failure recurred. The vehicle was taken to the dealer and the dealer stated that the headlight needed to stop illuminating completely in order for them to perform a diagnosis. The manufacturer was not contacted. The failure mileage was 43, and the current mileage was 91, Low beam headlights afs will start flickering and then turn off without no apparent reason. Sometimes it will be only one, sometimes both. Dealer says it could be either the bulbs, the ecu unit in the headlight or the control system. This started happening way before the 50k warranty but dealer denied any repairs as they could not "reproduce" the problem. A few nights ago I ran over a dog because of the poor visibility. I have stopped using this car at night because of the hazard to me and my family. I had this same issue about 3 to 4 months ago with my passenger side headlight. The dealer says that they replaced the wires and housing on the passenger side headlight since they could not verify the exact issue. I am concerned that this is a electrical issue. My car is a Lexus GS While driving at night, either headlight and sometimes both will go out. Most of the time its the passenger side headlight. I've take it to the dealership to troubleshoot the problem and to correct it. They have not been able to replicate the problem, so are unable to fix it. It doesn't matter if the headlights are in automatic or manual mode. What I have found out that if I turn the lights off and back on, they work. It could be for 5 minutes or the next miles. If anyone has figured out what the problem is, I sure would appreciate knowing. I don't need getting a ticket because 1 or both lights go out prior to passing a policeman. Hello, I have a Lexus Gs awd. Purchased brand-new. The headlights are very low. I took in the first week and they said adjusted them, but still the same troubles. Then the headlight completely turns off. I again take in it under warranty and they replace the light bulb. Still the same problem. I complained over and over. Still nothing. I still drove the car since new with the faulty headlights until this day. Last week on Monday oct. I went out to get milk for kids around 8pm, I drove up to the a local store and turning into the parking lot, mind you my headlights only let me see only about 6 feet in front of the car. I started to turn and almost hit a kid riding his bike home. I slammed on the brakes and steered towards the curb. I freaked out!! I almost hit a 12 year old boy because my headlights!! I had over 15 cars and never have I seen this problem before. What if I hit this kid or even worst, killed him! Factory setting is wrong. These headlights are dangerous! I don't understand why there isn't a recall. Every Lexus form has every complaining about the headlights! I refuse to drive this car at night. I'm planning on selling it or trading it in. I have 2 kids, what if my kids are riding bikes or your kids and someone else doesn't see them due to poor headlights. I honestly don't believe this car isn't safe to be on the road. Headlights are very important. The dealer adjusted them 3 times. Please help us the people, your friends and loved ones be safe. God bless us all! I bought a Lexus Gs At nights the low-beam hd lights does not project far enough, I have a hard time seeing oncoming objects on the road in dark roads. I feel that this is a possible danger if not corrected. The hid lighting system on the vehicle is aimed considerably low providing for extremely poor front illumination. The dealer claims that the lights are adjusted as high as Lexus allows. The only way to adequately see pedestrians, etc. At night is to drive with the high beams activated which is extremely distracting to other drivers. The leveling system on this vehicle clearly has a problem. Car Problems. Headlights problem 1. Headlights problem 2. Headlights problem 3. Headlights problem 4. Headlights problem 5. Turn Signal problems. Rosen Nissan helped make these videos. The video above shows you to replace the headlight in your Lexus GS Changing both headlight bulbs on your GS at the same time will allow both bulbs to have the same intensity and prevent the new headlight bulb from appearing brighter than the bulb on the opposite side. In some Lexuss, the highbeam is the same bulb as the headlight and it is possible for the highbeam to work, but the headlight be burnt out even if they are the same bulb and vise versa. Some Lexus have high intensity discharge headlights, sometimes referred to as xenon lights. These bulbs have a very high voltage that runs through them, even if the battery is disconnected. If your GS has this type of bulb, we do not recommend that you attempt to change it yourself. When you change the headlight on your GS, it is important to not touch the glass part of the bulb with your fingers because the oil from your fingertips will cause that part of the bulb to burn hotter, which significantly shortens the life of the bulb. Hans Angermeier has produced over , videos showing drivers how to fix things on

their cars. He has broad expertise on basic repair procedures covering the majority of cars on the road. If your brake fluid is a little low, learn how to add some here. Ignoring a low level leads to big problems. Car companies often use the same engines in different cars. They also slightly alter the styling and sell the same car by two different names amongst other tricks to help offset development costs. Our system selects the most applicable video for your car based, in part, on these characteristics. The video displayed may not look exactly like your car, but may be relevant enough for you to get a good idea how to do it. Getting Started - Prepare for the repair. Share on. Full list of part and tools. Author Hans Angermeier has produced over , videos showing drivers how to fix things on their cars. Change your cabin air filter! Dirty cabin air filter cause undue wear on your car's heater and AC and can cause bad odors. Change the parking light. Small bulbs that burn out regularly - did you know you can replace these with LED lights? If your car blows hot air when your air conditioner is turned on, try recharging the freon first. Add brake fluid. See all videos for the Lexus GS We have a massive and growing video library, but we don't have everything Sonar Lighting Tunersdepot. Prev 1 Next. Sonar aka Spyder has long been the most popular brand of aftermarket custom lighting, and for good reason due to their large selection, striking designs, and affordability. Smoke Projector Head Lamps enhance your nighttime driving by taking the existing light put out by your light bulbs and projecting it over a wider area, resulting in increased field of vision. The strip of super white L. R8 Style Projector Headlights also boost your head lens total light output increasing visibility allowing you to respond faster to obstacles that might come into your path. Black Projector Head Lamps enhance your nighttime driving by taking the existing light put out by your light bulbs and projecting it over a wider area, resulting in increased field of vision. Though they are the biggest, there are other options available, especially if you are looking for rare and unique styles to replace your stock GS Head Lights. Black Headlamps represents Tuners Depot's collection of head lights from lesser known and smaller companies. They often have more focused product lines, with specializations in certain rare applications as well as offering unique features. The Euro Halo Projector Head Lamps from these companies are great for keeping your Lexus GS differentiated from the pack, since unlike the bigger brands, they have much smaller production runs and can be very hard to find. As with all tail lens and head lamps even your OEM ones , putting a extra seal of silicone sealant available at any hardware or automotive part store along the seam of your Lexus GS DRL L. Overtime your HID Ballast can fail resulting in a headlight that flickers or does not turn on at all. Every ballast is designed to connect directly to your vehicle and requires NO programming or coding. These ballasts are commonly mounted either on the back or on the bottom of the headlight. Please see our procedure below to determine if your factory HID Xenon Ballast has failed or if you simply need to replace your headlight bulb. The bulb out warning light on your instrument cluster can signal that there is a problem with your headlights. While sometimes a bad headlight bulb can be to blame, it can also be a bad HID ballast. Follow our instructions below to confirm if your HID ballast is bad. The headlights are an essential part of your vehicle and are a neccessity for driving at night. Driving with a headlight out is not only dangerous but it's also against the law. Remove the headlight bulb and inspect it for any discoloration or cracks. A good headlight bulb will look like the one pictured above. If no discoloration is present, switch both headlight bulbs from one headlight to another. Installing parts on you vehicle can be difficult and we understand. That's why we have certified technicians on staff to assist you with installation or even properly diagnosing your car. Our technicians will even provide the factory repair manual to make installation easier for you. All of our HID Ballasts undergo strict quality control not just before shipping but throughout the production process. During each step of production multiple quality control checks are performed to insure each and every part lasts for years to come. Located in sunny South Florida and founded by long time car enthusiasts, AA Ignition takes pride in providing quality products at an exceptional value. This is a compatible replacement part manufactured by AA Ignition. Lexus, Toyota and their associated vehicle models are registered trademarks of their respective owners. These trademarks and part numbers are used in this listing only to identify the vehicles this HID Ballast fits.

I ordered from another company at a lower price and it worked just fine this companies description of their product and claim that it is interchangeable with the OEM part is not true I would never order from this company again or advise anyone to do so. Price was great. Delivery was great. Fit was exact and indiscernible from the OEM product. You DO have to be sure of which lighting system you have as the ballasts, igniter and most importantly the bulb have to match the lighting system in your Prius. The seller is excellent. One note only: the picture indicates that it should come with a power supply wire, but I did not receive it. This worked for my Toyota Prius Touring. It involved completely removing the entire housing, separating the headlight receptacle from the HID body and the reconnecting it once installed. Not exactly a plug and play but it is getting the job done. You can find some good you tube videos for direction. I have a Prius this unit works great would buy it again,. It worked fine; however I had to cut the wire to the bulb adapter to install the ballast as there was not enough room for the bulb connector to get through the tight area of the headlight assembly. I just had to reconnect the wires and everything worked well. Went in Lexus gs Worked perfectly. Installation was super smooth as well, and all connectors are in perfect condition. Note: You do not have to cut the wires - it's a super tight squeeze, but you can push the plug through in one spot. Took about two hours to FIND that spot. That's on Toyota. Works great, looked to be in perfect condition. I'm happy. See all reviews. Top reviews from other countries. They looks amazing over my stock headlamps. But buyer be warned, these will not work properly if you have an AFS system and do not come with the ballasts or headlight bulbs. I just removed the systems fuse to get rid of the flashing light. Just an FYI. Hope this helps! I have to say this look much nicer, and shine brighter than the more expensive pair I bought previously from eBay. Even though they are both the same brand spyder. Not built with quality material. Product is flimsy. The weather strip is really weak. Not ploished finished product. Left head light went off completely about 1 hr long in drive. When cool off the light turn back on. Need to check how it behaves down the road. One person found this helpful. It looks nice. Especially at night. One problem though. Its smaller and gives a very dull and bland look to it. Not bright by any means what so ever. The OEM ones wouldn't fit so I had no choice but to use the ones that came with it but other than that it looks great. Verified Purchase. The mounting holes are not identitical to factort unit. Some mounting holes do not line up. The wiring is too short to be connected. Ima
