So far I have been very happy with the car. It drives smooth, brakes well, and the transmission seems to work flawlessly. I am most happy with the turning radius, as my last two vehicles were monsters to turn and try to park. I also looked at the Q5, and besides the Audi being more expensive, I did not like the idea of the turbo 4 cyl engine. I've driven an audi with a turbo before, and it seemed very inconsistent - thats something that I did not want to deal with again. The RDX has great acceleration and sounds pretty good too when you step on it , its too bad they hid the dual exhaust tips up under the rear bumper. I was driving in the freeway, traveling up a grade where a car was stalled in the middle lane with no battery to power its lights. I smashed into the back of it going around mph, that was a shock! We, as well as my family, were very impressed with the safety of the car. I plan on buying another sometime in the future. Read more. Read less. Sign Up. The most recently reported issues are listed below. Headlights are dull and makes it are to see at night. Changed out bulbs but did not fix the problem. If Acura is aware that the lights are so dem at night that drivers can not see clearly, this is a safety issue they should take care of. This is ongoing problem since ive owned the vehicle and has gotten worse through the years. I started to go to work earlier in the morning while it's still dark. My lights don't seem to be working. I had the bulbs replaced a couple of days ago and it still not much of a difference. I pray every time I'm driving at night because I can't see a thing and don't want to get in an accident. I am so frustrated with this and I don't know what else to do. Low beam headlights do not emit enough light to safely operate the vehicle at night. The high beam is necessary to see the road, road signs or any objects in the roadway. My wife and I purchased our Rdx in and have enjoyed all aspects of the car except for the headlights. Ever since we have owned the car the headlights have been dim. My wife has not driven the car very much at night in the last couple of years but recently we have had to drive it at night and the headlights have gotten much worse. I called Acura to complain and funny as it may sound but the woman that I spoke to said that headlights not working is not a safety issue and the headlights will not be recalled. I asked if I drive at night and crash because I cannot see if that was a safety issue and she still said it wasn't. I am perplexed that when someone comes out with a faulty product that the company will do everything in their power to save money even if it is at the expense of the individual that supports that company. It is hondas responsibility to take care of the issue but obviously they don't care. Basically at this point if I were to drive without the lights on I don't think that there would be much of a difference. Low beam head lights are not effective, passes inspection but not adequate even with upgraded light bulbs. Passenger while sitting in passenger seat asked if lights were on during nighttime errand run. Unable to drive much at night and if it is raining or foggy at night then unable to use. Currently exploring using led light upgrade. Concerned lense may be discolored as well. Another Rdx owner told me they had to replace whole headlight assemblies due to damaged caused by oem light bulb. I own a Acura Rdx and my headlights are extremely dim, making it hard to drive at night. The lights have been replaced and that didn't help. It has a newer battery and no alternator issues. I have seen online that customers are experiencing the same problem and that my car is not recalled for this issue. Other Acura vehicles have been recalled for the same thing. I have contacted Acura client services and they basically said my warranty is expired. This is dangerous and could cause me to have an accident. It seems like Acura doesn't want to take responsibility for this issue. The headlights at night are extremely dangerous to drive with. There is practically minimum light projected on the road and from the drivers seat can only be seen 3 to 4 feet projecting out from the vehicle. Acura please be accountable! The housing projector is flawed. This could be a fatal issue!!! Ti the contact owns a Acura Rdx. The contact stated that while driving at night, the low beam head

lights were very dim, reducing the visibility for the driver. The vehicle was taken to the local dealer precision Acura of princeton located at us-1, lawrenceville, NJ , who diagnosed that both the driver's and passenger's side headlight assemblies were faulty and needed to be replaced. The vehicle was not yet repaired. The manufacturer was also notified of the failure. The failure mileage was 80, The contact owns a Acura Rdx. The stated that the headlights were very dim, making it hard to see while driving at night. The vehicle was taken to gunn Acura interstate 10 w, san antonio, TX where the contact was informed that the technician was unable to duplicate the failure. The vehicle was repaired. The failure recurred. The contact mentioned an unknown manufacturer however, the VIN was not included. The manufacturer was made aware of the failure and informed the contact to contact the dealer for additional repair options. The failure mileage was approximately 54, We purchased out vehicle a little over a month ago, because of the pandemic had not driven it at night until this past weekend. When returning home from out of state, it started getting dark lights were turned on as it got darker we could notice that you couldn't see anything in front of you unless you has the high beams on, which is not safe to drive with on a major highway. It was very frightening getting home without getting into an accident. When I checked there was a recall jn2 issued for this same problem. The recall states the following "consequence: delamination of the aluminum film may diminish output of the headlight, increasing the risk of a vehicle crash. Remedy: Honda will notify owners, and dealers will replace both of the headlights, free of charge" but when I checked my VIN was not part of the recall, which I don't understand why since what the recall states is what is happening with our car. I've called and keep getting the runaround, and I keep getting told there are no recalls for that VIN well maybe there should be. I just want my car fixed to avoid a major accident a fatality. Both driver and passenger low beam headlights illumination has decreased significantly to the point it is unsafe to drive at night. It does not provide proper lighting to illuminate road, road signs or other vehicles. The illumination does not change if vehicle is stationary or while driving. Has 80k miles and it appears its is a common problem with Acuras of this year and model. Installed new bulbs and it is still too dim. Vehicles will flash their lights at me thinking I do not have my low beams on but I do they just suck. In my research, it appears that there is an issue with a reflective area inside the headlight assembly that affects the brightness of the bulbs. I believe this has been recalled on a another Acura model about the same age. I also understand that the only solution is to replace the entire headlight assembly which cost over a couple thousand each. The glass cover over the front of the headlight is also fogged or yellowed a bit with age but not concerning. I have noticed this problem since summer of but now it is to the point that I do not drive my car at night and have to borrow family members' vehicles due to my and others safety. The halogen headlights low beams on the base degrade to the point that they are not bright enough for nighttime driving. Even high beams are barely effective. Replacing bulbs does not resolve the issue. The contact stated that the lo-beam headlights were very dim, causing a visibility hazard while driving at night. The contact stated that the failure was more evident while driving in inclement weather. The contact replaced the bulbs twice however, the failure persisted. The vehicle was taken to fountain Acura orange blossom trail, orlando, FL , The contact was informed that the projector lens failed to function as designed which caused the lack of illumination from the headlight bulbs. The vehicle was not repaired. The manufacturer was notified of the failure. The failure mileage was approximately 98, The headlights are way too dim - even after changing bulbs and the lens is not fogged at all. You can't even tell if your lights are on at night - this is a serious safety issue. Other Acura vehicles have a recall for this. In research - the reflective coating that is supposed to illuminate your beams breaks down in a short time resulting in poor lighting of roadways at night. Recently had someone in the car for the 1st time driving at night - and they asked if I had my lights on. So it is very noticeable by people. Is there not a standard of lighting that has to be met for safety? Headlights are on but absolutely no visibility on the road at night. Head light enclosure is clear and not fogged over. Severe safety issue. Other Acura and Honda headlights on other models have been recalled for same issue. I first noticed this last year and changed out the halogen bulbs. I do not do much driving at night. In the past month with the time change, I can barely see at night while driving. The halogen bulb has been changed out again, so its not the bulb. It is something within the headlight assembly itself - very difficult to drive at night. At times I must turn on the high beams when driving down a dark road. This cannot be fixed without purchasing new complete headlight assemblies. Headlight flickering - was told it was bulb but have found complaints on the ballast and other Acura models with problems with headlights. Light flickers while parked, in motion at random times. I own Acura Rdx and my headlights are extremely dim, making it hard to drive at night. I saw many Acura Rdx owners reported same problem. Read more Car Problems. Headlights problem 1. It was introduced to Hong Kong in lasting until , Mexico in , [2] China in , Russia in no longer available in Russia and Kuwait in , and was also sold in Ukraine until Acura is the first Japanese automotive luxury brand. In its first few years of existence, Acura was among the best-selling luxury marques in the US, Though sales were down in the mid-to-late s, the brand experienced a revival in the early s, due to drastic redesigns and the introductions of new models. In the late s, the success of the company's first flagship vehicle, the Legend , inspired fellow Japanese automakers Toyota and Nissan to launch their own luxury brands, Lexus and Infiniti , respectively. The launch of the NSX , a mid-engine exotic sports car, offered a reliable and practical alternative to exotic European sports cars, and introduced Honda's VTEC variable valve timing system to the North American market. The brand was created around the same time as Japanese rivals Nissan and Toyota developed their respective Infiniti and Lexus premium brands. The Japanese government imposed voluntary export restraints for the U. Following a decade of research, Honda opened 60 new dealerships in North America by , to support its Acura automobile division. Acura was the first Japanese luxury brand, introduced under the slogan, "Acura. Precision Crafted Automobiles. It was mechanically related to the Rover series, while the Integra was an improvement of the Honda Quint hatchback. The success of these models, particularly the Legend, led to competing Japanese luxury brand ventures Toyota 's Lexus that began development in as the F1 project, and Nissan 's Infiniti who began development in by revising their Japan-only flagship Nissan President ; in the late s Mazda planned but never launched its own Amati luxury division. The goal of the Legend was to compete with rivals Toyota Crown and the Nissan Cedric and Gloria , but due to its introduction worldwide, Toyota, Nissan and other companies like Lincoln took notice of the markets reaction to the Legend and later the Vigor and offered vehicles that addressed the executive size car. In , Acura's first full year of sales, they sold , cars with the flagship Legend sedan accounting for 55, sales and the rest were of the smaller Integra. In , five years after the debut of the Legend and Integra, Acura introduced the NSX , a midship V6 powered, rear-wheel-drive sports car. The NSX was the world's first all-aluminum production car, and was also marketed and viewed by some as the "Everyday Supercar" thanks in part to its ease of use, quality and reliability, traits that were unheard of in the supercar segment at the time. With the release of the NSX, Acura introduced the "A-badge", a stylized pair of calipersâ€"a tool used for exacting measurements to imply that Acura vehicles are built to precise and demanding standards. Despite a strong start in market acceptance for the Acura brand, sales suffered in the mid-to-late s. Some critics attributed this decline in part to less inspiring designs, which were re-branded Japanese-spec Hondas, such as the Acura Vigor in Additionally, during this time Acura switched to an alphanumeric nomenclature formula, dropping the Legend, Vigor and Integra titles, following the lead of the NSX sportscar. The 3. The parent company, Honda, was also feeling the results of the decline of the Japanese economy, due to the Japanese asset price bubble that took place during the s and into the s. This period is known in Japan as The Lost Decade. During this time, the NSX also lost sales as Acura made few changes from its original trim. A year later, the Integra sedan was withdrawn from the Canadian market, replaced by the market-exclusive Acura 1. Despite these letdowns, Acura gained prominence in the s with a young group of customers: "tuner" enthusiasts. Parent company Honda's reputation with this demographic as a maker of "easy-to-tune" and "rev-happy" engines rubbed off onto Acura, and the Integra became a popular tuner car. Beginning around the year , Acura experienced a rebirth which was catalyzed by the introduction of several redesigned models. The first of these models was the Acura 3. Critics suggested that although 3. Subsequent Acura models have followed a similar philosophy of offering much standard equipment and few options. By the late s, Acura had dropped the inclusion of engine displacement numbers in its vehicle designations, retaining a simpler, two- or three-letter designation instead e. The TL have been plagued by transmission and other problems. In , a new coupe, badged as the RSX was introduced to the Acura line up. It was a replacement for the outgoing Integra. As a result, the RSX is technically a new generation of the outgoing Integra. Much like the Integra, the RSX was a hit in the tuner market. However, at the end of , the RSX was taken out of the Acura line up, subsequently in the Japanese market as well. It is not known why the RSX did not continue to be sold as the Integra in Japan, however, the reason that Acura gave for the cancellation of the RSX is that Acura wishes to move up in the luxury brand, thus cannot sell a car that is mostly driven by teenagers. The new TL increased sales dramatically to 70, American units in Also around the same time the Acura TSX was introduced. It was essentially a re-badged European and Japanese market Honda Accord loaded with features. Acura's new modelsâ€"particularly the TL and TSXâ€"were well received by the motoring press and became Acura's top selling vehicles by then. Acura

re-introduced the TL Type-S for the model year. Acura planned on redesigning the RL by as well as announced the creation of a brand new luxury crossover vehicle called the ZDX , previewed by the concept of the same name. It is also the first Acura to be completely built in North America. The concept behind the ZDX is that it is a "four door coupe," and the design emphasis of the body of the car is like a "pulled back slingshot. The ZDX went on sale in December Acura initially had plans for the third generation of RL to be a rear wheel drive V8 sedan for its flagship , but shelved the plans in the wake of the economic downturn. The wagon version of the TSX is based on the wagon version of the Euro-spec Honda Accord which has been in the European market for some time. However, Acura did not announce any plans for the third-generation RL. For the model year the MDX models received some slight exterior changes and increased equipment levels. Mechanically the engine remained unchanged but the transmission was updated from the previous 5-speeds to 6-speeds including steering column mounted shift override paddles. This new transmission was shared with the ZDX. The ILX was initially offered with three powertrain options: a 1. For the new model, Acura dropped the 4 cylinder turbo for a 3. When the official Acura RDX was released, it was relatively similar to the concept but had changes in wheels, taillights, and some other cosmetics. A lot of this Acura looks like its brother the ILX. Shortly after, it was released to the public. It has a horsepower 3. Acura technology firsts on the RLX Sport Hybrid SH-AWD also include an electronic gear selector that replaces the conventional, center console-mounted shift lever with an efficiently packaged push-button array allowing the driver to easily select the desired modeâ€"Park, Drive and Reverse, as well as Sport and Normal driving modes. The TLX in the 2. Meanwhile, the high-end 3. The TLX went on sale in the Summer of In , Acura redesigned the ILX for the model year. Now solely available with a 2. Added is the signature Acura Jewel Eye LED headlights, LED taillights, updated wheels, suspension modifications, bumper redesign, and new packages such as AcuraWatch Package includes adaptive cruise control, collision mitigation, lane keeping assist system, road departure mitigation, and forward collision warning and A-Spec sportier appearance. Also redesigned is the RDX. Featured with the same 3. A new Advance Package is being offered with the inclusion of, parking sensors front and rear , rain-sensing windshield wipers, auto-dimming side mirrors, remote start, ventilated seats, and foglights. Acura would go on to take the Lights championship in its initial year, including a class win at the 24 Hours of Daytona. Acura and Comptech would take the Lights championships again in and , as well as another Daytona class win in and a class win at the 12 Hours of Sebring for In , Acura added Acura Integras to the lower classes, and were successful in taking the championship in both of these classes. Realtime took the touring championship with the Integra again in , and came within a few points of winning it again in only to lose it in the final race, then coming back to retake the title in Although the NSX squad suffered mechanical woes and were unable to take the title, the Integras of the touring class once again took the teams championship. By , Acura replaced the aged Integra with the new Acura RSX in the final races of the season, scoring good finishes in their debut. The cars would be purchased chassis from existing manufacturers, but use American-built Acura V8s a first for Acura and Honda. Acura also announced their initiative to take the cars to the 24 Hours of Le Mans in and eventually move to the superior LMP1 class with cars built by Acura themselves In The three Acura-powered prototypes debuted at the 12 Hours of Sebring , which was the opening round of the ALMS season, and were successful in their debut. At the same time, Acura began development of their own chassis by heavily modifying their purchased Courage chassis. The cars now have been so radically changed from their original orientation that they are now named Acura ARXa. The car would retire from the race due to engine problems. This time the car won its class and finished 8th overall. The car competes under Honda branding outside North America. The Acura logo, introduced in for the model year, is, according to Honda, a caliper - a design tool used for measuring [16] that can also be interpreted as a skewed "H" for Honda or a stylised "A" for Acura. The logo that was originally authorized without approval by Soichiro Honda did not contain the small horizontal bar joining the two vertical pillarsâ€"thus, it did not form the letter "H". Soichiro Honda ordered the 5, badges already produced to be destroyed, including prying off the emblems applied to cars already US-spec Integra, Legend, and NSX models. Acura's current marketing slogan is "Precision Crafted Performance. Technology and Advance models typically come with the latest hi-tech features such as keyless start and a blind spot information system. Type-S and SH-AWD models are performance-oriented, with a substantial increase in horsepower compared to the lower trim levels. Some models, such as the TL, also combine trim levels i. Acura began an association with Marvel Entertainment in , upon release of the film Iron Man 2 , which featured a ZDX after the ending credits. On 20 April , Acura and Marvel announced a promotional campaign, making Acura the official brand of Marvel's fictional S. In , Acura was the presenting sponsor and official vehicle of the Sundance Film Festival. Acura also has a 'Mobility Program'

that ensures drivers who are disabled are safe in their vehicles. The program offers cash reimbursement towards the cost of adaptive equipment for disabled drivers. Acura was the official shirt sponsor of the Columbus Crew from to From Wikipedia, the free encyclopedia. Japanese luxury vehicle brand owned by Honda.
