Rx8 airbag light

The light can switch on for reasons unrelated to any defect in the air bag safety system, or it may illuminate because of a genuine problem that should be corrected. If you have recently performed certain types of routine work on the Mazda, such as replacing the car battery or installing a new stereo, chances are the SRS light merely needs to be reset. Try these steps to turn out the light; if it persists, go to a mechanic to have the safety systems checked out. Turn the ignition key from the Off position to the ACC accessories position 10 times without actually starting the vehicle. In some cases, this will reset the SRS light and cause it to shut off. Check the fuses in the fuse box under the steering column and replace any that are blown. A bad fuse can cause the SRS light to come on. Disconnect the negative cable from the battery terminal using pliers or a wrench. Leave the cable disconnected for at least 10 minutes. This should cause all electronic systems to reset to the original factory default settings. Disconnect the SRS air bag diagnostic connector, which is either under the dashboard on the driver's side or under the hood in the upper corner near the windshield on the driver's side. See photos in the Resources section. Take the car to a Mazda mechanic with the computer diagnostic tool to reset the light. It is better to pay a mechanic to identify and resolve what could be a serious problem with your air bag safety system than to ignore the SRS light. James Clark began his career in He has written about electronics, appliance repair and outdoor topics for a variety of publications and websites. He has more than four years of experience in appliance and electrical repairs. Clark holds a bachelor's degree in political science. Step 1 Turn the ignition key from the Off position to the ACC accessories position 10 times without actually starting the vehicle. Step 2 Check the fuses in the fuse box under the steering column and replace any that are blown. Step 3 Disconnect the negative cable from the battery terminal using pliers or a wrench. Step 4 Disconnect the SRS air bag diagnostic connector, which is either under the dashboard on the driver's side or under the hood in the upper corner near the windshield on the driver's side. References Mazda consumer site Mazda airbag diagnostic connectors information. Pliers or wrenches Replacement tube fuses for the fuse box. Don't ignore an SRS light. You could be putting your life and the safety of your passengers at risk. Why is my airbag light on? A number of reasons could work behind an illuminated airbag light. The airbags are one of the prime safety features in a car. They protect you from head injuries when there is a serious accident. When the light starts flashing, you should immediately take action to resolve the problems. So, what causes airbag light to come on? It could happen when your car battery is low or has been drained for some reasons. The problem will be gone once the battery is fully recharged. However, the battery could still be on. You have to use a scan-tool and remove the soft-code error to switch it off. It has some thin circuit bands that may fray or brittle after some time, causing the bag to send a soft-code error report to the airbag control module, which ends up with a flashing light. In case of such a problem, you have to take it to the repair shop for the replacement of the spring. This is the third reason of your why is my airbag light on query. In most cars, you will find the control module underneath the seat of either the driver or the front passenger. So, it will corrode if those parts are exposed to water. Sometimes, we need to do it when working on the electrical components in the dashboard. Before starting the process, make sure that all the dash components have been plugged correctly. The first step is to turn the ignition switch on, which will make the airbag light to come on. The light will flash for exactly seven seconds. Once it is off, you have to turn off the ignition within a second. Turn the ignition on again after three seconds. Repeat this process for two or three times and the airbag light will stop flashing. Tsukasa Azuma is an awesome car blogger of Car From Japan. He owns a car repair shop at downtown Osaka, and he put all that experience to good use in his sharing posts. My air bag is ever on have tried some of procedures that u have mentioned above no no change model probox. Thanks a lot. Followed your procedure. Tightened the connections underneath the drivers seat and yes the airbag sign on the dash board disappeared. I have to express my thanks. God bless you more. Your tips on the video fixed my srs airbag light on issue. Have a blessed day. I have Nissan Armadale pathfinder Le , the airbag light continue flashing or blinking each time I start my truck. And this have being going on since 4 months now. Good Evening. My airbag light comes on as soon as i connect the battery and it will not go off. It doesnt blink, just stays on. I have a Toyota Corolla. I checked all the fuses and the wire under the seat is connected. I have had it with Nissan!! I have a Nissan Versa SL my transmission when out at a little over , miles, I went online to see if there was other problems with other Nissan owners and I was surprised at how many people had complaints. Most of the complaints were with Nissans in my year range and of car and with the CVT transmission with so many complaints Nissan raised the warranty mileage to 10 yr , the normal warranty mileage 5 yrs 60 , Since mine was over by 5, miles Nissan North America would not honor the warranty. It cost me almost 4, dollars for a rebuilt CVT; Next I had a recall on my airbags which took over 5 months to get an appt to exchange them. One month after getting my car back my Airbag light on my

dashboard started blinking. I called Nissan North America again and asked them to please help me with the airbag light that I was just out dollars well I got a sorry we cannot help you and they told me that I would have to take it to a Nissan dealership and pay to have it looked at and then if they figured out that it was their fault they would fix it but if not I would have to pay. His car is parked, another car hits at about kph. Its not touching the wheel, but the bumper is damaged.. My dodge Daytona has been in the shop 5 times now for the air bag warning light. Mostly morning times on my way to work. Only a few times some days but 15 times on another. Top man, it has turned off my airbag light. Not sure how long for but it has certainly worked for now, Thanks!!!!! I have a Mazda Tribute, no accidents. I have checked fuses and connections and it just stays on. No flashing just stays on. No seatbelt problems that I can tell either. Any ideas? I have managed to turn my airbag light off how do I tell if it is faulty or not will it come back on when driving?? If this helps anyone. I had the same airbag light flashing problem. After searching on internet, I have found that there is the issue was inside my gloves box on the passenger side. There was a panel at the top which came down. All I had to do it push it upward until it fitted to something. I had to still reset the light by turning key on and off as this article suggests And many more on the internet. Also worth checking all the wire connections under your seats. I have nothing but problems with my Subaru Outback since having the airbags replaced Dash clock not working seatbelt lights flashing air conditioner blowing hot air and then my car stalled and the alarm and locks not working this all happened after airbags replaced? It apparently keeps a connection for the airbag even when the steering is turning. Leave A Reply Cancel Reply. Login with Google. Likes Followers Followers. Import used cars directly from Japan. Mazda RX 8 car warning lights, car warning symbols such as engine management light, ABS light, airbag light this guide will help you. We have created this Mazda RX 8 dashboard lights meaning guide and will show you how to deal with an engine light, airbag warning light, ABS light and all of the other car warning signs on your dashboard. You might need to buy a scanner online which will show Mazda trouble codes and clear the warning light for good. Mazda RX-8 engine warning light - also known as check engine light. The light will illuminate on your dashboard when there is a fault within the engine, you can proceed with caution but you should diagnose the fault as soon as possible. Mazda RX-8 airbag warning light - if the airbag light illuminates on the dash on your Mazda RX-8 it means there is a fault within the airbag system also known as the SRS or Supplimental Restraint System. Mazda RX-8 ABS warning light - Antilock Braking System - the light will briefly show up when you start your engine but will turn off after a few seconds. If the light does not automatically turn off or it comes on during your cruise, it means there is a fault within the ABS module and more than likely needs a new ABS sensor. Since your vehicle has 4 abs sensors it is difficult to tell which one needs to be replaced. The DSC may have a malfunction. Mazda RX-8 power steering warning light - This indicator light illuminates when the ignition is switched ON, and turns off when the engine is started. The power steering malfunction indicator light illuminates if there is a malfunction with the power steering while the engine is running. If the indicator light illuminates, park the vehicle in a safe place immediately and stop the engine. If the indicator light does not turn off even if the engine is restarted afterwards, consult an Authorized Mazda Dealer. Mazda RX-8 master warning light - this warning light stays on for a few seconds when the ignition is switched ON. The light illuminates continuously if any one of the following occurs. Consult a Mazda Dealer. There is a malfunction in the battery management system. Mazda RX-8 coolant warning light - The light illuminates continuously when the engine coolant temperature is low and turns off after the engine is warm. If the low engine coolant temperature indicator light remains illuminated after the engine has been sufficiently warmed up, the

temperature sensor could have a malfunction. Consult an Authorized Mazda Dealer. The indicator light flashes if the BSM system has a malfunction. It turns off when the parking brake is fully released. When flashing The indicator light flashes continuously if the system is malfunctioning. Park the vehicle in a safe place immediately and stop the engine. Refer to Overheating. Otherwise, it could result in damage to the engine. The warning light will illuminate or flash under the following conditions: Illuminates when there is an abnormality with the AWD system. Illuminates if there is too much difference in tire radius between the front and rear wheels. Flashes when the differential oil temperature is abnormally high. Flashes when there are continually large differences between front and rear wheel rotation, such as when trying to pull away from an icy surface, or when trying to extricate the vehicle from mud, sand or similar conditions. Mazda RX-8 cruise warning light - indicates that your cruise control system is currently active. Mazda RX-8 traction control warning light - this indicator light stays on for a few seconds when the ignition is switched ON. If the light stays on, the TCS, DSC or the brake assist system may have a malfunction and they may not operate correctly. Take your vehicle to an Authorized Mazda Dealer. Mazda RX-8 security indicator light - this indicator light starts flashing every 2 seconds when the ignition is switched from ON to OFF and the immobilizer system is armed. The light stops flashing when the ignition is switched ON with the correct key. At this time, the immobilizer system is disarmed and the light illuminates for about 3 seconds and then turns off. If the engine does not start with the correct key, and the security indicator light keeps illuminating or flashing, the system may have a malfunction. Mazda RX-8 tyre pressure warning light - if this light illuminates on your dashboard it indicates that one or more of your tyres is not inflated to the correct pressure or PSI. Please check your tyre pressures. Under or over inflated tyres can lead to loss of MPG. Mazda RX-8 automatic transaxle warning light - this warning light stays on for a few seconds when the ignition is switched ON. The light illuminates when the transaxle has a problem. Mazda RX-8 screenwash warning light - means that you are low on windscreen wash fluid. Please check your water level and top up. Mazda RX-8 open door warning light - simply means that a door is not closed correctly. Check all doors before you continue your journey. Mazda RX-8 seatbelt warning light - one or more passenger has not fastened their seatbelt. Please buckle up. Safety first. Mazda RX-8 oil warning light - indicates that the oil pressure within the engine is low. You should pull over as soon as it's safe to do so, then check your oil levels. If the oil level is low you should top up as soon as possible, if there is already sufficent oil in the engine, your oil level sensor could be faulty and may need to be replaced. Mazda RX-8 battery warning light - indicates that the battery is not being charged. The fault could be with your battery or alternator. You are advised to have the systems checked by your local Mazda workshop. View All Scan Tools. Best Car Scan Tools For Multi Vehicle Scan Tools. Professional Scan Tools. DPF Regeneration Tools.
